

Maintenance and Care

For Engineered Stone

MAINTENANCE AND CARE

FOR ENGINEERED STONE BENCHTOPS

Engineered Stone is a man made material that requires very little maintenance to keep it looking good.

EVERYDAY CLEANING

For everyday cleaning it is recommended to wipe the surface clean with warm soapy water using a mild detergent and a clean damp cloth.

For a spray and wipe easy cleaning, **Sealers Plus Re Fresh +** offers a rinse and streak free cleaning solution.

TOUGH GRIME & PRECAUTIONS

Care should be taken when cleaning tough marks and grime with strong chemicals & solvents as the surface can be damaged & its physical properties undermined.

Never use products that contain trichlorethane or methylene chloride, such as paint remover or strippers.

Avoid contact with highly aggressive cleaning agents like oven cleaners that have a high alkaline/pH, if exposed then rinse the surface immediately with water to neutralize the effect.

For heavy duty cleaning, **Sealers Plus Xtreme Clean +** will remove dirt, grime, grease, wax & soap scum whilst inhibiting mold growth with its concentrated antibacterial action formula.

GENERAL PROTECTION

Although Engineered stone is considered an heat resistant material, it can be damaged by sudden and rapid surface temperature changes.

It is always recommended to use a wooden or cork heat protection mat when using hot pots, oven trays and fry pans directly form the heat source. If the temperature is too hot to touch by hand then it will be too hot to be placed on the engineered stone surface.

It also recommended that chopping boards are used for cutting of food preparation to avoid the surface of the stone being damaged.

PRODUCTS

All sealing and cleaning products are available to purchase directly from Stone Tile Warehouse at 62 Westchester Road, Malaga (08) 6558 0511 or our Bernini showroom at 181 Hay Street, Subiaco (08) 9388 1178

- Sealer Plus **ReFresh +**
